

SMSAVER v2

Installation Guide

Welcome to SMSAVER — the pocket CRM designed for independent professionals and micro/small businesses. With SMSAVER you always have a professional, robust marketing tool at your fingertips, at a much more accessible price.

Why isn't it on the Play Store?

Because SMSAVER sends SMS messages, Google's policies prevent it from being published on the Play Store. The APK is distributed exclusively from the official website, is digitally signed, and is safe to install.

Downloading the App

Always download from the official website: smsaver.eu. Never download from unofficial sources.

Warning — Security First

Before installing, always make sure you have downloaded the APK from smsaver.eu. The APK file is digitally signed to guarantee its authenticity.

Step-by-Step Installation

1

Go to the download page

Open your phone's browser and navigate to <https://smsaver.eu/en/install/>

2

Download the APK

Tap the "Download SMSAVER (.APK)" button and wait for the download to complete.

3

Install the app

Open the downloaded `smsaver.apk` file and follow the on-screen instructions. Once installation is complete, tap "Open".

4

Google Play Protect

Google Play Protect may ask to scan the app — confirm yes. In most cases it will report the app as safe (it is digitally signed). If a false positive appears, please contact support.

5

Notification Permission

On first launch, the app will ask for permission to send notifications. This permission is **optional** and is used for SMSAVER calendar alerts.

6

Initial Setup / Demo

On the settings screen, enter your licence key or start a free 7-day demo: fill in your name and email and tap "Start 7-day demo". The demo activates immediately.

Troubleshooting

False positive in Play Protect

Occasionally Google Play Protect may flag the app as suspicious (false positive). If this happens, contact support — the issue will be resolved promptly.

Cannot install the APK

Android may block installations from external sources. Go to Settings → Security → and enable "Install apps from unknown sources" for the browser you used.
